Back Engineer @ Indie Campers with a solid foundation in software development and strong problem-solving skills. Currently enrolled in a Master's Degree in Computer Science and Engineering. I'm especially drawn to challenging projects where I feel that my contribution brings meaningful value and real-world impact.

PROFESSIONAL EXPERIENCE

Ruby on Rails Backend Engineer 03/2026 – Present | Lisbon
Indie Campers
Backend engineer building and maintaining the core systems behind a campervan rental platform. Work spans a large Ruby on Rails modular monolith and a modern pricing service that together power the business end to end, from search and booking to payments, fleet management, and billing. Beyond feature delivery, I drive the modernization of legacy systems and own the reliability of services that customer bookings depend on daily.

Enterprise Architect Intern 07/2025 – 12/2025 | Lisbon
Vodafone
Developed an AI-augmented Application Lifecycle Management framework, enhancing automation and efficiency across the application lifecycle. Additionally, developed an agentic application using OutSystems to interact with the applications repository, retrieve data and KPIs, generate dashboards and alerts, and provide recommendations.

EDUCATION

Master's in Computer Science and Engineering 09/2025 – Present | Lisbon
Instituto Superior Técnico

Bachelor's in Computer Science and Engineering 09/2021 – 07/2025 | Lisbon
Instituto Superior Técnico

PROJECTS

Beekeeper-studio
Modern and easy to use SQL client.
Contributed to an open-source project, which gave me valuable experience in collaborating on external codebases. This improved my ability to write clean and modular code, strengthened my Git workflow skills, and taught me how to communicate effectively with other developers in a professional environment.

Roadtrip Planner
Fullstack web app
Engineered a full-stack routing application that transforms user-defined origins and destinations into comprehensive driving itineraries . Built with a React frontend for a seamless user experience, powered by a Ruby on Rails API backend. The system leverages a PostGIS database for advanced spatial data management, specifically for storing geographical coordinates and calculating accurate route distances.

Fresh Eyes on Fres Produce
JunctionX Lisbon 2026 Hackathon
Co-built a retail shelf-monitoring system. A computer vision pipeline checks every shelf area in ceiling camera images for planogram compliance and stock level, and turns problems into restock tasks for staff. It runs behind a FastAPI + PostgreSQL backend, with a React/TypeScript dashboard where staff can track or close tasks.

INTERESTS

Swimmer — I have been a competitive swimmer since 2018, training over six times per week. My focused training and dedication demonstrate my commitment and discipline, making me a valuable asset to any team.
